

- There is a link marked "HG630a Firmware" on our User Guides page - select this link to download the file and fix WiFi related issues.
- Please connect the Laptop/Computer to one of the LAN Ports (Yellow colored Ports-LAN1/LAN2/LAN3/LAN4) of the router or one of your smart device to the router via WiFi.

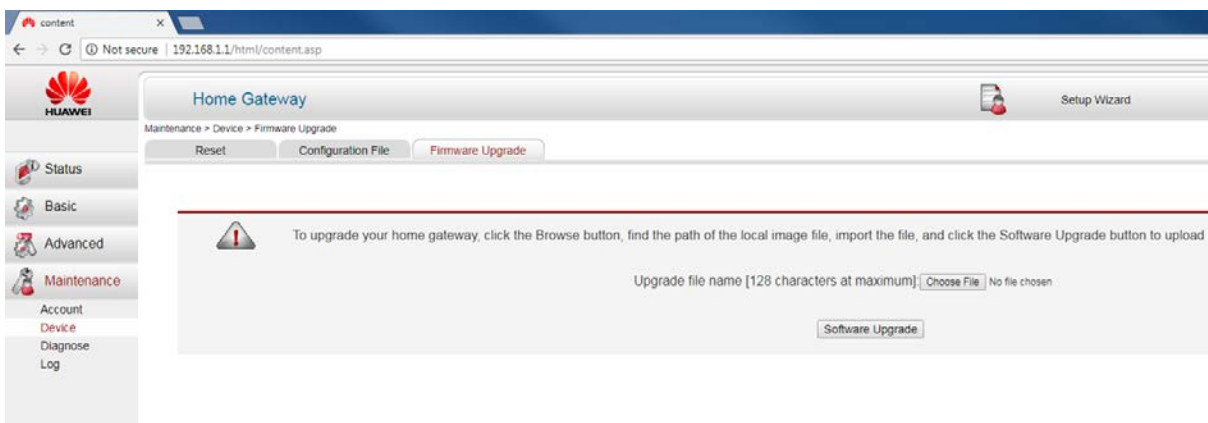

- Open a web browser, for example, Google Chrome or Internet explorer and at the top in the address bar please type in "192.168.1.1" and hit enter

- Enter user name as “admin” and password admin

- Once you logged in to the router, on the left bottom corner of the router page, please click on maintenance and device and then Firmware upgrade

- Please click on choose File and select the file which you saved on your desk(Sent by Fuzenet) and then click on software upgrade.
- Once this is done, WiFi related issues would be fixed, especially WiFi broadcasting issue
- If you still have issue with the WiFi broadcasting, please change the WiFi security mode by performing the following steps
- Click on Basic and then click on WLAN

The screenshot shows the Huawei Home Gateway web interface. The browser address bar displays "not secure | 192.168.1.1/umi/content.asp". The page title is "Home Gateway". The navigation menu on the left includes "Status", "Basic", "Link Interface", "WAN", "LAN", "WLAN", "Advanced", and "Maintenance". The "WLAN" tab is selected, and the "WLAN" sub-tab is active. The "Enable WLAN" checkbox is checked. The "Wireless Settings" section is expanded, showing the following configuration options:
